Introduction

Article 36-A of the Executive Law provides that the New York State Motor Vehicle Theft and Insurance Fraud Prevention (MVTIFP) Board "shall develop and recommend to the Commissioner a **Plan of Operation** which shall provide for a coordinated approach to curtailing motor vehicle theft and motor vehicle insurance fraud throughout the state. The plan shall provide an integrated means to detect, prevent, deter and reduce motor vehicle theft and motor vehicle insurance fraud by providing funds, upon the recommendation of the Board and approved by the Commissioner, to meet these objectives."

The Board is committed to ensuring that the Plan of Operation reflects not only the interests and concerns of government officials whose duty it is to enforce criminal laws and to direct the administration of justice in New York State, but also the views of the insurance industry, professional organizations and citizens. In developing the plan, the Board has embraced a programmatic approach based upon proven effective methods of various Auto Theft Prevention Authorities (ATPAs) throughout the nation.

Due to the divergent nature of the problems of motor vehicle theft and insurance fraud, the Board has chosen to address Motor Vehicle Theft and Motor Vehicle Insurance Fraud as separate, individual plans. This document represents the Plan of Operation for Motor Vehicle Insurance Fraud.

Eligible Programs

Based on Article 36-A of the Executive Law, §846-m, activities eligible for funding include, but are not limited to, the following:

- Prosecution and adjudication services (county and municipal agencies, only).
- Law enforcement services (county and municipal agencies, only).
- Neighborhood or community based programs designed to reduce the incidence of motor vehicle theft and motor vehicle insurance fraud.
- Educational programs designed to prevent the incidence of motor vehicle theft and fraudulent claims practices.

Funds provided under this program shall be used to augment, and not supplant, the provider agency's current funding, if any, for motor vehicle insurance fraud detection, prevention, or reduction activities.

Outline of Statewide Plan of Operation

This Plan offers effective strategies that can be adapted by local, county and state agencies to decrease the incidence of motor vehicle insurance fraud through integrated means of detection, prevention, and deterrence. The Plan is presented in the following format:

Part I: Problem Identification of Motor Vehicle Insurance Fraud

The collection of accurate and timely crime data is essential in the identification of a motor vehicle insurance fraud problem, as it allows agencies to answer the "who," "what," "where," and "when" of motor vehicle insurance fraud and related crimes. However, because the state's Penal Law does not distinguish between vehicle-related insurance fraud charges and all other insurance fraud, the most accurate measure of the crime of vehicle-related insurance fraud is currently the countywide data provided by the New York State Department of Financial Services (DFS) Insurance Frauds Bureau.

Part II: Analysis of the Motor Vehicle Insurance Fraud in New York State

Through the analysis of timely and accurate data, an agency is provided the means to determine the "why" with regards to the occurrence of motor vehicle insurance fraud and related crimes. Determining causes and trends is essential in the development of an effective crime reduction strategy that targets the identified problem. The Plan analyzes motor vehicle insurance fraud and related crimes on both a statewide and regional level.

Part III: Areas of Concentration in the Statewide Plan of Operation

The Plan shall provide an integrated means to detect, prevent, deter and reduce motor vehicle insurance fraud and related crimes. The areas of concentration for the plan are as follows:

• Law Enforcement: Detection/Apprehension

Prosecution: Adjudication/Conviction

Public Awareness: Prevention/Education

Part IV: Evaluation

The Plan presents standardized performance measures that are recommended for inclusion by law enforcement and prosecution agencies in the evaluation of their strategy to decrease motor vehicle insurance fraud and related crimes.

Part I: Problem Identification of Motor Vehicle Insurance Fraud

National Overview

During the 1960s, traditional motor vehicle liability insurance became the target of public criticism due to the expensive and time-consuming process of determining who was at fault and, therefore, legally liable when an accident occurred. In response to this consumer dissatisfaction with the insurance industry, some states enacted no-fault legislation, allowing accident victims to recover financial losses (i.e., medical costs and lost wages) from their own insurance companies regardless of who was at fault.

In 1974, New York became one of 12 states that initiated genuine no-fault motor vehicle insurance. According to the Insurance Information Institute, only 11 other states and Puerto Rico currently have no-fault laws.

No-fault laws are intended to lower the cost of auto insurance by keeping claims out of the courts. In most states, no-fault laws require insurers to cover the injury costs of their own policyholders, known as first-party coverage, regardless of who is at fault.

According to the Insurance Information Institute (the Institute), industry estimates generally put fraud at about 10 percent of the property/casualty insurance industry's incurred losses and loss adjustment expenses each year, although the figure can fluctuate based on business and economic conditions and other factors. Using this measure, over the five-year period from 2009 to 2013, property/casualty fraud amounted to about \$32 billion each year.

The Institute noted that the arrest in March 2012 of 36 people, part of a criminal ring that included physicians and personal injury lawyers, highlighted New York's no-fault insurance crisis, its huge cost and the seriousness and extensiveness of the crime. The group, which had billed insurers for more than \$279 million in fraudulent claims since at least 2007, used runners to chase ambulances and locate victims of actual accidents who were then sent to the group's medical clinics, sometimes for unnecessary medical treatment or sometimes just to sign their names.

On a national level, identifying the crime of motor vehicle insurance fraud in order to develop strategies that allow law enforcement to target the problem is difficult. Unlike motor vehicle theft, theft from a motor vehicle, or theft of motor vehicle parts and accessories, instances of motor vehicle insurance fraud are not reported as part of the FBI's Uniform Crime Reporting program. As a result, there are no uniform definitions of insurance fraud among the states, and the level of seriousness attached to the crime also varies. Some states classify insurance fraud or certain types of fraud as a felony, others as a misdemeanor. In addition, the dollar amount involved can determine whether the crime is considered a felony.

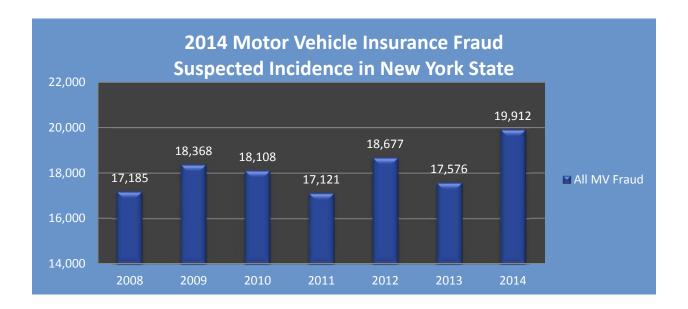

According to the Institute, not all states require special investigation units of insurance companies to forward every suspicious claim to their state's fraud bureau. These reports of "suspected incidents" of insurance fraud are handled in-house by insurance carriers or by civil actions instead of being prosecuted criminally.

Statewide Overview

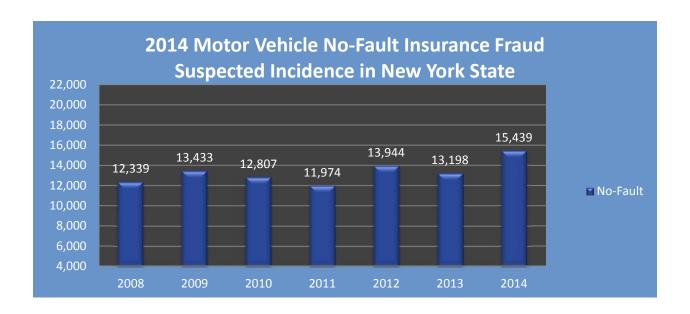

According to the DFS 2012 Consumer Guide to Automobile Insurance, which is the most current publication available, New York State drivers are required to secure auto insurance that includes:

- No-Fault Personal Injury Protection (PIP): To pay medical expenses, lost earnings and other reasonable and necessary expenses for a driver or passenger injured in, or a pedestrian injured by, their vehicle;
- **Liability:** To protect against the harm their vehicle, or any vehicle they drive with the owner's permission, might do to other people and their property; and,
- **Uninsured Motorists:** To protect against the injuries that they, their family or their passengers might suffer in a hit-and-run accident or in an accident with an uninsured vehicle.

Legislative findings associated with the creation of the Motor Vehicle Theft and Insurance Fraud Demonstration Program (New York Executive Law §846-J) note: "Motor vehicle theft and motor vehicle insurance fraud are a major problem in New York and costs honest motor vehicle policyholders billions of dollars annually.

In 2014, there were 19,912 incidents of suspected motor vehicle insurance fraud reported to the DFS Insurance Frauds Bureau, including fraud related to motor vehicle theft, motor vehicle fire, larceny from a motor vehicle, motor vehicle vandalism, motor vehicle collision damage, motor vehicle fraud bills, motor vehicle insurance cards, and motor vehicle miscellaneous and no-fault. This represents a 13.3 percent increase over 2013 figures.

Of the 19,912 incidents of suspected motor vehicle insurance fraud reported statewide, 15,349 pertained to no-fault insurance fraud. Based on this data, no-fault insurance fraud accounts for approximately 77 percent of all reported suspected incidents of motor vehicle insurance fraud. In addition, suspected incidents of no-fault increased from 13,198 in 2013 to 15,439 in 2014. This represents a one-year increase of approximately 17 percent.

Part II: Analysis of Motor Vehicle Insurance Fraud in New York State

Statewide Analysis

Motor vehicle insurance fraud, in general, is any intentional deceptive conduct relating to one's contact with, use, registration or ownership of a motor vehicle or treatment of its occupants in the context of insurance claims involving theft, property damage, accidents, bodily injury or medical care. It may occur during the process of selling, buying, underwriting or using insurance, is nearly always committed for the purpose of financial gain and frequently involves the commission of other crimes.

Insurance fraud diverts vital resources away from businesses, law enforcement, the civil justice system, regulatory agencies and local emergency services. Motor vehicle insurance frauds range from simple acts to elaborate schemes, are highly profitable and have a relatively low risk of apprehension, prosecution and imprisonment.

Motor vehicle insurance fraud is the act of deceiving an insurance company for profit: a deliberate attempt to stage, invent or exploit an accident, injury, theft, arson or other type of loss that would be covered under an insurance policy. These crimes generate significant profits for the perpetrator(s) and result in unwarranted insurance carrier expenditures that are ultimately passed along to the public via increased premiums.

Types of Motor Vehicle Insurance Fraud:

- Application Fraud/Policy Misrepresentation/Premium Fraud: Fraud can occur during the underwriting process when drivers apply for new or renewal coverage. An applicant may not mention prior or existing damage to a vehicle or that the vehicle was salvaged in another state. Applicants may not reveal moving violations, accidents or drunk driving convictions in their driving histories. Applicants may provide inaccurate information about the number of miles driven, the usage of vehicles (pleasure vs. work), the distance between home and work or the actual garaging location (rate evasion). Applicants may apply for or secure coverage after an incident has occurred, falsify the incident date and make a claim for the damage to be covered. Withholding any information or providing inaccurate and misleading information can be considered fraud.
- Born Again Vehicle: This refers to a stolen or renumbered vehicle that, through the use of a forged duplicate title, a counterfeit title, a manufacturer's source document showing the Vehicle Identification Number (VIN) or the original title that has been returned to the United States from an illegally exported vehicle, assumes the identity of a vehicle that has been exported.
- Claim Exaggeration/Claim Padding: Overstating an insurance claim or falsely reporting
 items stolen from the vehicle to make up for the policy's deductible or to recover some of
 the money that has been paid for insurance coverage in the past.
- **Cloned Registration:** A stolen vehicle that bears a "replacement" tag obtained by using bona fide registration information obtained without the vehicle owner's knowledge.
- Cloned VINs: Found on stolen and renumbered vehicles equipped with a counterfeit VIN
 that can be found on a legitimate vehicle of the same make and model. Through the use
 of a forged duplicate title application, with a "transfer" or Registration Only (RO)
 transaction, the vehicle becomes legitimized.
- Commercial Application Fraud: This occurs when a group of individuals are in an alleged application misrepresentation scheme for commercial vehicle insurance. The scheme may involve several individuals allegedly acting as a major insurance broker for numerous car rental and leasing companies, or cabs and limo services that work almost exclusively in the New York City metropolitan area. However, the majority of the listed addresses are located in upstate counties. These locations are used to facilitate their alleged rate evasion scheme. Several large carriers are receiving numerous auto casualty claims that they are presently adjusting. The vehicles are all registered to the upstate addresses while allegedly being housed and utilized in the New York City area. Losses to numerous insurance carriers and the state total in the millions of dollars.
- **Counterfeiting:** Counterfeiting in the context of motor vehicles refers to forging, altering and/or copying motor vehicle-related documents without a legal right to do so.

Advancements in computer and printer technology have made it possible for the creation of counterfeit documents, providing perpetrators with the means to fraudulently obtain vehicles, parts, and/or motor vehicle insurance coverage. While DFS and the state Department of Motor Vehicles have developed documents and verification procedures that deter these types of crimes, counterfeiting and document fraud continue to be perpetrated. The following are examples of ongoing document fraud with regard to motor vehicles:

- Counterfeit Insurance Cards: Illegal storefront "insurance companies" may issue invalid insurance cards to unsuspecting vehicle owners at very low prices, or a fraudster may present a forged insurance card to law enforcement as "proof" of insurance.
 - Due to the use of two-dimensional bar codes by DMV, there has been a decrease of fraudulent New York State insurance cards; however, out-of-state cards can continue to be a problem.
- Counterfeit Title: Typically, a heavily financed vehicle is reported stolen and the insured presents his insurance company with a counterfeit title listing himself as the sole owner and omitting the bank or finance company as lien holder.
- **Duplicate Title:** The insured person sells the vehicle, obtains a duplicate vehicle title, reports the vehicle stolen, and then surrenders the duplicate title to the insurance company. This method nets proceeds from the sale of the vehicle and the vehicle theft settlement from the insurance company.
- Embezzlement from an Insurance Carrier/Theft of Premiums: Any scheme whereby an insurance agent deliberately fails to remit policyholder premiums to the insurance company and instead pockets the premiums.
- Export Fraud: A vehicle stolen and illegally shipped overseas to be sold. Export fraud may involve the theft and shipping of high-end or difficult to secure vehicles that fetch a premium price overseas or owner give-ups looking to reap profits from insurance settlements. Non-manifested vehicles or vehicles discovered in cargo containers being shipped out of the country that do not appear on shipping manifests, are a primary indicator of export fraud.
- Faked/Staged Accident or Incident: An event created to intentionally cause damage to a vehicle. One or more parties collude to cause an intentional collision to collect on bodily injury or property damage insurance. Such incidents usually involve low speed and result in little damage to vehicles. The perpetrators may cause a collision with an innocent party or operate all vehicles involved in the collision. States with no-fault insurance systems are more vulnerable to this type of fraud as shorter, state-mandated periods for injury payments give insurance companies limited time to investigate incidents and determine whether fraud has taken place. Staged "accidents" have many variations, including the following:
 - o Drive Down/Wave: A perpetrator (Vehicle 1) observes an innocent driver (Vehicle 2) attempting to switch lanes. The perpetrator will "wave" Vehicle 2 to proceed, indicating it is safe to maneuver into the lane, then accelerate to cause a collision with Vehicle 2. When the police arrive, the perpetrator will deny ever providing a courtesy wave, placing Vehicle 2 at fault.
 - Hit and Run/Paper Accidents: The owner of a vehicle with existing damage reports a "hit and run" incident in which the vehicle was damaged in order to fraudulently collect insurance payment.
 - "Jump-in": Perpetrators will falsely report to police that they were a passenger in an accident. This scheme may be utilized in a staged/faked accident, a paper/fictitious

accident and/or an unintended accident.

- Phantom Victims: Participants use fraudulent identification and/or provide erroneous personal information, complicating subsequent efforts by investigators and law enforcement to locate and apprehend them.
- Sideswipe: A perpetrator on the inside lane of a dual left-turn lane drifts into the outer lane, intentionally forcing a collision.
- Swoop and Squat/Swoop and Stop: A scheme involving three cars, two drivers (Vehicle 1 and Vehicle 2) with criminal intentions and one innocent driver (Vehicle 3). This scheme occurs when vehicle 1 is suddenly passed by vehicle 2 ("swoop"), causing vehicle 1 to stop abruptly ("squat") and vehicle 3 to collide with the rear end of vehicle 1.
- Swoop and Squat Enhanced: This scheme involves four cars, three drivers (Vehicle 1, Vehicle 2 and Vehicle 3) with criminal intentions and again one innocent driver (Vehicle four). This scheme adds a third vehicle which is located in the next lane opposite the victim's vehicle and prevents the intended victim's vehicle from being able to avoid a collision by swerving into the adjoining lane at the last moment in order to avoid the collision.
- o **T-Bone:** A perpetrator (Vehicle 1) waits for an innocent driver (Vehicle 2) to proceed through an intersection and then accelerates to T-bone the vehicle. When the police arrive, phony witnesses then claim Vehicle 2 ran the stop sign or traffic signal.
- Falsified Theft Reports: The owner of a vehicle submits a false claim for items reported stolen from a vehicle or exaggerates a claim for items that were actually stolen.
- **Hidden Repair Fraud/Inflated Repair Estimates:** Working in collusion with the owner of a vehicle, an auto body shop inflates the extent of the damage to cover the deductible. Independent damage appraisals help to eliminate this type of fraud.
- **Internet-Based Fraud:** There is a growing use of the Internet to commit fraud and scam buyers, including the following:
 - Auctions/Internet Sales: There is a growing use of the Internet to sell vehicles to rebuilders and individuals. Sites are used to sell VIN tags, license plates and other illegal parts of vehicles. While some sites prohibit the sale of these items, the volume of items listed makes monitoring and removal of prohibited items a challenge. Salvage vehicles with "clean" titles, multiple sales of a single vehicle, as well as the collection of money for a vehicle that was never delivered are examples of frauds facilitated by the Internet. These crimes are difficult to police and prosecute as Internet sales are not regulated by any one jurisdiction.
 - o **Fraudulent Documents:** Fraudulent driver's licenses, "International Driving Permits" and/or "International Driver's Licenses" are easily obtained through various websites, and those documents are used to commit identity fraud and insurance fraud.
 - o **Fraudulent Motor Vehicle and Parts Identifiers:** Web sites (i.e. VIN-TAG.com) supply a wide range of blank VIN plates to customers. This allows the re-tag of stolen

vehicles and/or salvage vehicles that are un-insurable.

- Fraudulent Photos: Alternate and/or doctored photos of pristine and/or damaged vehicles allow fraudsters to falsify information regarding registered vehicles and/or accident insurance claims.
- Information Websites: Various online sites offer instructions detailing how to fake signs of whiplash, create a phony corporation, answer questions at an independent medical exam requested by an insurance carrier, and establish a successful fraud scheme or medical clinic.
- Obtain Keys to Motor Vehicles: Using the identifying code for an ignition key, a copy can be made by a web-based company and sent via the mail to whomever pays for it. The key can then be used in an "owner give-up" scam or straight-up steal.
- Kickbacks/Insurance Company Employee An employee of an insurance company may be accepting kickbacks from auto body shops to verify false claims or working with attorneys to settle claims for a percentage of the kickback.
- **Mileage Fraud/Odometer Rollback:** Resetting the odometer to show fewer miles than actually driven.
- Motorcycle Frame Replacement: An insured reports his/her motorcycle as stolen and then purchases an after-market replacement frame. The insured removes all the minor component parts off the original bike and affixes them to the replacement frame. The replacement frame has a full 17 character VIN number and a certificate of origin. The certificate of origin is used to register the vehicle as a different make and model with a new VIN number. In some cases, they will also abandon or drop the frame bearing the original VIN number.

In New York State, all custom motorcycles that are built are required to be inspected by DMV investigators. Due to these inspection requirements, many individuals engaged in this practice will title and register vehicles in another state and operate them in New York with the out-of-state registration.

Another common scam criminals commit against consumers interested in purchasing a used motorcycle is to assemble a cycle from replica after-market parts and then sell it as an original. This is known as a "cloned" cycle and is an age-old method for ripping off unsuspecting consumers.

• Owner Give-Up, Drug-Related: A drug buyer will lend/lease his vehicle to a dealer/supplier in exchange for drugs or as collateral for a specified period of time. Rather than return the vehicle to its rightful owner, the dealer may use the vehicle to commit a crime (e.g., drug trafficking, burglary, etc.), pass the vehicle off to other individuals s/he is loosely associated with, and/or dump the vehicle when it is no longer of use. When the vehicle is not returned to the registered owner as previously arranged, the registered owner reports it stolen to the police department.

The vehicle is usually recovered close in time to when the report is made and often in the possession of an individual not a party to the original lend/lease transaction. This scenario is generally viewed as a situation of unauthorized use. An owner give-up "drug car" situation rises to the level of insurance fraud when the registered owner/drug user reports the vehicle

to the insurance carrier as "stolen."

- Owner Give-Up, Phony Theft/Staged Auto Theft: The intentional abandonment or destruction of an owned or leased vehicle, which is then reported stolen to collect from an insurance carrier. Owner give-ups are motivated by a variety of reasons, including: owner needing cash; mechanical problems requiring expensive repairs; problems in making car loan payments, lease or insurance premium payments; and/or over the mileage allowance on a leased vehicle. Types of owner give-ups include:
 - Arranged Arson: The owner of a vehicle, or a second party engaged by the owner, sets fire to a vehicle in order for the owner to collect on an insurance claim.
 - Dumped Vehicle: A vehicle that is intentionally disposed of, such as "dumping" it in a river, lake or swamp and later claiming it stolen.
 - Thirty-Day Special: A vehicle in need of extensive repairs is reported stolen and kept hidden for the 30 or more days needed to process and collect on an insurance claim. At some point after the claim is paid, the original owner dumps the car, which may ultimately be found. During this time, the perpetrator of the scam obtains a new vehicle. The original vehicle, if found, becomes the property of the insurance company.
- Paper/Fictitious Accidents: Rather than staging an accident for the purpose of committing insurance fraud, participants file an accident claim for an accident that never took place.
- Paper Vehicles/Phantom Vehicles: Vehicles that exist only on paper for the sole purpose of defrauding an insurance company. After an insurance policy is obtained using phony information as to the vehicle's existence and identification, a fraudster will report the vehicle stolen and file a theft claim with the carrier.
- Repair Shop Fraud: This fraud takes advantage of an unsuspecting owner of a vehicle: Repair shops may fraudulently increase their profit by: charging for repairs that were not made, for unnecessary work or billing for more hours than were actually worked; a replacement part while the original part was repaired; and charges for original equipment manufactured parts (OEM), when the vehicle actually receives used parts of like kind and quality (LKQ) or after-market parts. An additional type of repair shop fraud is the Ro-Tow:
 - Rotation Tow Fraud (Ro-Tow): A towing company transports a recovered stolen vehicle in relatively good condition to a conspiring repair shop and the vehicle is stripped of valuable parts prior to owner and/or insurance adjuster identification. The repair shop is then able to collect compensation from the car owner's insurance company to "repair" the car they stripped. If the car is declared totaled, or is transported by the owner to another shop, the conspiring repair shop retains the stripped parts for use or salvage.
- Sale of Phony Insurance: An individual posing as an agent or company representative sells counterfeit coverage from a phony or non-existent insurance company or bogus coverage using a legitimate company's name, or a name that's similar to a legitimate insurer. Consumers may receive a fictitious policy and/or proof of insurance.

- Salvage Fraud: Attempt to collect on a fraudulent insurance claim based on a vehicle that has been declared a "total loss" due to sufficient damage produced by collision, fire or vandalism.
- **Salvage Switch:** A stolen and renumbered vehicle bearing the VIN of a previously salvaged vehicle for which a title was issued based on the title of the salvaged vehicle.
- **Scapegoat Theft:** Person claiming that their vehicle was stolen to avoid the consequences for another offense: for example, a person whose vehicle has collided with and damaged another vehicle may leave the vehicle and declare it stolen in order not to be responsible for the damage.
- **Title Washing:** Title washing involves the transferring of a vehicle title between different states to remove salvage branding. The variation in state laws regulating salvaged vehicles allows cars to go from state to state. In addition, states use different mechanisms to disclose damage of a vehicle to consumers.

Highly Organized Motor Vehicle Insurance Fraud Schemes:

False Endorsement:

Following an actual accident, a fraudster may provide contact numbers to an alleged five-star repair shop, a powerful lawyer and/or a caring doctor. In actuality, each contact is a participant in the fraud scheme. The repair shop will consciously overcharge repair fees, the lawyer will pressure the accident victim into filing a lawsuit, and the doctor will bill for medical treatment never performed and/or unnecessary medical treatment provided.

Corrupt Clinics and Health Care Providers ("Medical Mills"):

Most faked or staged accidents or incidents that occur as part of motor vehicle insurance fraud schemes are linked to corrupt clinics and other health care providers, such as acupuncturists, anesthesiologists and chiropractors. The ultimate goal of these medical mills is to exploit New York's no-fault insurance laws for optimal financial gain.

The medical mills are paid by insurance companies upon an assignment of benefits executed by all "accident victims" receiving treatment. Whether the accident victims come from staged accidents, fictitious accidents or have been recruited following the occurrence of a real accident, the object of the scheme is to bill the insurance company for the maximum amount of benefits allowed.

The corporate set-up and structure of these clinics lends itself to fraud. A management company bills for services provided by a Professional (medical) Service Corporation (PC). This management company is owned by someone who is not allowed, by law, to provide medical care. The payments flow from the professional corporation to the management company where the funds are received by the non-professional. The PC in this case is simply a front for collections.

Faked/Staged "Accident" (Incident) Indicators: The following represent common indicators regarding faked/staged accidents:

- unbiased witnesses who categorically deny the prospective claimant's version of events;
- overly cooperative bystander/eyewitnesses who happen to be related to the "victim";
- accidents resulting in tremendous damage to one car, with practically none to the other:
- accidents with phantom vehicles;
- accidents appearing to have been deliberately caused by the "victim";
- multiple "victims" in vehicles provide conflicting and inconsistent accounts to the responding officer about their destination, pre-accident activities and relationship to one another:
- accident "victims" receive extensive treatment for vague "soft tissue" injuries at same or similar clinics;
- recently registered older vehicles in poor condition with assigned risk insurance code
 999;
- a vehicle is rear-ended or sideswiped (lone drivers are often targeted) and the vehicle that caused the accident has multiple passengers;
- livery-type vehicle picking up multiple passengers is then sideswiped or rear-ended by a vehicle;
- registered owner of a vehicle and the driver have the same address but different surnames:
- out-of-state driver's license and a vehicle with a New York registration;
- accident "victims" that have been in numerous other accidents resulting in billings to insurance companies through the no-fault system; and/or
- the registered owner of the vehicle involved has been the registered owner of other vehicles involved in suspect no-fault billings accidents.

Regional Analysis

In its final report on closed auto injury claims in New York State published in November 2011, the Insurance Research Council (IRC) indicated that the average loss among claimants in the New York City metropolitan area was more than double the average loss in the rest of the state, \$15,086 compared with \$6,870.

The report also highlights the differences in what is described as claiming behavior between residents of New York City and those of the rest of the state, noting that New York City residents were more likely to be treated in clinics, visit chiropractors, physical therapists and acupuncturists, receive expensive diagnostic procedures and to report expenses for durable medical equipment. They were also more likely to hire attorneys. In particular, the IRC study identified the New York City boroughs of Brooklyn and Queens as hotspots for abuse, accounting for 52 percent of apparent abuse claims but only 28 percent of claims in the study.

According to a 2012 study by the IRC, New York ranked second among states for personal injury protection (PIP) claims closed with payment that had the appearance of fraud and/or inflation of otherwise legitimate claims (known as claim buildup). The incidence of apparent fraud or buildup in New York State was 24 percent. Claims with the appearance of fraud and/or buildup were more likely than other claims to involve chiropractic treatment, physical therapy, alternative medicine and the use of pain clinics.

Part III: Areas of Concentration in the Statewide Plan of Operation

The Plan shall provide an integrated means to detect, prevent, deter and reduce motor vehicle insurance fraud and related crimes. The Plan identifies the following four areas of concentration as essential for an effective statewide motor vehicle insurance fraud strategy. Each of these areas contain elements that have been identified by experts in the field as effective strategies within the area of concentration.

Law Enforcement/Detection/ Apprehension:

In order to continue the impact on motor vehicle insurance fraud and related crimes by law enforcement, the following efforts should be incorporated:

1. Coordinated Efforts and Enhanced Communications:

| Motor Vehicle Insurance Fraud 2013 vs. 2014 Top Ten Counties | | | | | | |
|--|-------|-------|---------|--|--|--|
| County | 2013 | 2014 | Change | | | |
| New York | 2,035 | 5,268 | +159% | | | |
| Kings | 4,650 | 4,326 | -7.0% | | | |
| Queens | 2,993 | 2,977 | 13% | | | |
| Bronx | 2,784 | 2,359 | -15.3% | | | |
| Nassau | 1,329 | 1,431 | +7.67% | | | |
| Suffolk | 807 | 895 | +10.9% | | | |
| Westchester | 418 | 465 | +11.2% | | | |
| Erie | 496 | 414 | -16.53% | | | |
| Richmond | 284 | 292 | +2.8% | | | |
| Monroe | 284 | 222 | -21.8% | | | |

Within each law enforcement agency: The impact of an individual law enforcement agency is greater when efforts of its distinct units, such as patrol and detectives, act collaboratively. In addition, two-way intelligence briefings should be used to effectively focus efforts.

Within each county: The coordination among agencies through an informal or a formal task force approach can result in effective methods of detection and apprehension. Experience across the state has shown that it is essential for the district attorney's office to be a primary partner, especially from the beginning of more complex, undercover, or long-term investigations. Inclusion of state agencies also is essential, as it provides additional manpower, intelligence and the prevention of overlapping or competing investigations. This includes the utilization of the Secure Automated Fast Event Tracking Network (SAFETNet).

SAFETNet/UDECS: This statewide de-confliction system that enhances officer safety by
preventing two or more agencies from simultaneously pursuing investigations against
common targets. Targeted people and places of case investigations are entered into
SAFETNet through the New York/New Jersey High Intensity Drug Trafficking Area Regional
Intelligence Center (HIDTA) or the Upstate New York Regional Intelligence Center (UNYRIC).

Within New York State: Initiate meetings of law enforcement agencies from contiguous counties and special -investigations units (SIUs) of insurance carriers.

2. Effective Enforcement: Problem identification and analysis enable law enforcement agencies to effectively target their enforcement initiatives. Based upon experience from current grant funded programs in New York and other states, the following enforcement methods should be considered when a law enforcement agency is combating motor vehicle insurance fraud and related crimes:

- Sting operations that target the crimes identified through problem identification and analysis;
- Development of confidential informants through assistance of the district attorney's office;
- Development of expertise in personnel at patrol and detective / investigator levels through training and field experience.
- Audit teams of state and local officers to inspect repair shops, scrap yards and dismantlers;
- Vehicle Identification Number tracking systems;
- Utilization of advanced technology for investigations and surveillance; and
- Ongoing statistical analysis and utilization of intelligence data centers.

Prosecution/Adjudication/Conviction:

In order to continue the impact on motor vehicle insurance fraud by effective prosecution, the following efforts are to be incorporated:

1. Coordinated Effort and Enhanced Communications:

Within each DA office:

- dedicate staff to motor vehicle insurance fraud and develop expertise;
- utilize vertical prosecution: and
- assist in the coordination of investigations within the county and work closely with law enforcement.

Within each county: The coordination among agencies through an informal or a formal task force approach can result in greater effectiveness in implementing methods of detection and apprehension. Experience has shown that it is essential for the district attorney's office to be a primary partner, especially from the beginning of more complex, undercover or long-term investigations. Inclusion of state agencies with missions relevant to the targeted crimes also is essential, as it provides additional manpower, intelligence and the prevention of overlapping or competing investigations. This includes the utilization of the Secure Automated Fast Event Tracking Network (SAFETNet).

Within New York State: Initiate meetings of law enforcement agencies from contiguous counties and SIUs of insurance carriers.

2. Making Appropriate Plea Offers and Sentence Recommendations to the Court

In those counties where district attorneys' offices have worked to enhance plea offers and seek stiff penalties for motor vehicle insurance fraud and related crimes, the efforts of police have been reinforced. It is important to communicate this need for a strong judicial response on these matters with an emphasis on communicating that these crimes are not "victimless." Leniency in sentencing tends to perpetrate the ongoing problem of motor vehicle insurance crime in our communities. The use of state RICO charges also has been effective in prosecuting organized crime rings.

Education/Training Programs

In addition to educating the public, it is essential to educate law enforcement personnel and prosecutors. While experience in the field is invaluable, the foundation for effective enforcement and prosecution is quality training. The development of all-encompassing training programs is important, with the input of seasoned investigators essential. The length of training seminars can vary from one to four days, as well as simple roll call programs of checklists that can be easily used in the field. Emphasis should be placed on the development and delivery of training programs for the following target groups:

- Patrol and investigative law enforcement personnel;
- Law enforcement agency command and executive level personnel;
- Law enforcement training directors of New York State;
- Prosecutors;
- Magistrates and judges;
- Insurance industry underwriting and SIU personnel; and
- · Community groups and the general public.

The MVTIFP Board recommends that one way to enhance training programs is to present a team comprised of a local prosecutor, law enforcement investigator and insurance carrier investigator where the program is being sponsored. The team members should be experienced, and include a local prosecutor who has developed expertise and has intelligence on motor vehicle insurance fraud and related crimes in the area.

Part IV: Evaluation

The evaluation of programs and projects is undertaken to ensure that their implementation is in accordance with agreed plans, objectives and goals, to prove that funds are used as agreed and to provide for possible adjustments and further planning of individual programs and projects. The Plan recommends the inclusion of standardized performance measures by law enforcement, prosecution, and education/training programs in the evaluation of their strategy to decrease motor vehicle insurance fraud and related crimes, as follows:

Law Enforcement:

Number of investigations initiated

Number of accident claims denied or withdrawn due to law enforcement investigation Value of accident claims denied or withdrawn due to law enforcement investigation initiation

Number of misdemeanor arrests (including types of charges levied)

Number of felony arrests (including types of charges levied)

Number of intra-agency motor vehicle insurance fraud meetings conducted and/or attended

Number and type of training sessions conducted

Number and type of training sessions attended

A narrative summarizing current inter-agency collaborative efforts regarding motor vehicle insurance fraud

Prosecution:

Number of investigations initiated Number of warrants issued Number of indictments

Number of misdemeanor arrests prosecuted

Number of felony arrests prosecuted

Number of misdemeanor convictions

Number of felony convictions

Number of motor vehicle insurance fraud cases taken to trial

Number of motor vehicle insurance fraud cases plea bargained

Type(s) of sentencing

Amount of funds (restitution) provided to the insurance industry

Number of intra-agency motor vehicle insurance fraud meetings conducted and/or attended

Number and type of training sessions conducted

Number and type of training sessions attended

A narrative summarizing current inter-agency collaborative efforts regarding motor vehicle insurance fraud

Education/Training Programs:

Subject areas, instructors and seminar outlines

Number and location of seminars held

Number of attendees per seminar

Number of agencies represented per seminar

Number of webinar trainings produced

Number of motor vehicle theft and/or motor vehicle insurance fraud articles published in The Empire State Prosecutor magazine.

Appendix A

New York State Motor Vehicle Theft & Insurance Fraud Prevention Board

History of the Board and Statewide Plan of Operation

Statistics

History of the Board and Statewide Plan of Operation

Introduction

During the late1980s, New York State experienced a dramatic increase in motor vehicle theft and fraud related crimes. From 1986 through 1990, the number of motor vehicles reported stolen increased by 65 percent. In response to that increase, New York State enacted Executive Law, Article 36-A (L.1994, c.170) creating the *New York Motor Vehicle Theft and Insurance Fraud Prevention Demonstration Program* to help reduce the overall cost of motor vehicle insurance in the state.

Funding for the Program is provided for under State Finance Law §89-d, *Motor Vehicle Theft and Insurance Fraud Prevention Fund*. As of June 1, 2009, the fund consists of monies received from the \$10 dollar fee assessed on each insurance policy issued for a portion of passenger vehicles and all other motor vehicles registered in the state (Insurance Law §9110).

Executive Law Article 36-A also authorizes the creation of a 12-member *Motor Vehicle Theft and Insurance Fraud Prevention Board* to make recommendations to the commissioner of the state Division of Criminal Justice Services regarding the administration of the Program. Members of the Board, selected by the Governor and the Legislature, include representatives of law enforcement, consumers of motor vehicle insurance, insurance carriers, and relevant state agencies. With the appointment of its members, the Board became operational in September of 1997 and made initial Program awards later that year.

Mission Statement

In accordance with Executive Law §846-1 and 846-m, the mission and purpose of the Motor Vehicle Theft and Insurance Fraud Prevention Board shall be to make recommendations to the commissioner of the Division of Criminal Justice Services (Commissioner) with respect to the exercise of his or her functions, powers and duties as set forth in Executive Law §846-1(3).

The Board shall also:

In accordance with the legislative intent of Article 36-A of the Executive Law, develop and recommend to the commissioner a **plan of operation** which shall provide for a coordinated approach to curtailing motor vehicle theft and motor vehicle insurance fraud throughout the state. The Plan shall provide an integrated means to detect, prevent, deter and reduce motor vehicle theft and insurance fraud by providing funds, upon the recommendation of the Board and approval by the Commissioner, to meet these objectives.

Suspected Motor Vehicle Insurance Fraud in New York State: 2014

| Rank | COUNTY | MV INSURANCE FRAUD | Rank | COUNTY | MV INSURANCE FRAUD |
|------|-------------|--------------------------|------|-------------|--------------------------|
| 1 | New York | 5,268 | 32 | Tompkins | 12 |
| 2 | Kings | 4,326 | 33 | Allegany | 11 |
| 3 | Queens | 2,977 | | Greene | 11 |
| 4 | Bronx | 2,359 | | Oswego | 11 |
| 5 | Nassau | 1,431 | 36 | Clinton | 9 |
| 6 | Suffolk | 895 | | Wayne | 9 |
| 7 | Westchester | 465 | 38 | Columbia | 8 |
| 8 | Erie | 414 | | Cortland | 8 |
| 9 | Richmond | 292 | | Seneca | 8 |
| 10 | Monroe | 222 | 41 | Delaware | 7 |
| 11 | Orange | 114 | | Essex | 7 |
| 12 | Onondaga | 98 | | Franklin | 7 |
| 13 | Rockland | 85 | | Genesee | 7 |
| 14 | Albany | 84 | | Madison | 7 |
| 15 | Oneida | 59 | 46 | Chenango | 6 |

| 29 | Cattaraugus | 12 | | Orleans | 2 |
| | Chautauqua | 12 | 61 | Hamilton | 1 |
| | Ontario | 12 | 62 | Yates | 1 |

While the New York State Department of Financial Services (DFS) receives reports from insurers of <u>suspected</u> fraud, these numbers cannot be assumed to reflect the true scope of the problem. DCJS must use the insurance industry numbers until a more accurate measure of the crime of vehicle-related insurance fraud can be identified.
